Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

Rank:	0 i0003z:
Sprint:	

Description

STILL EXISTS IN 1.1

Initial state: System is displaying the manu of withdrawal amounts.

Steps to recreate bug: Choose amount that the system currently has and which is not greater than the account balance.

Expected outcome: System dispenses the requested amount, prints a receipt showing amount and correct updates balance. System records transaction correctly in the log.

Actual outcome: System dispenses \$20 greater than the amount that was requested, prints receipt showing amount that it withdrew and the updated balance (of previous amount - incorrect withdrawn amount). In the log, system records withdrawal transaction being \$20 greater than was requested.

Description

FIXED IN 1.1

Function:

Transferring

Intial State:

\$100 in chequing

Steps to reproduce:

Insert card, enter pin for account 1, select transfer, select Money Market, select chequing, input \$5.55

Expected:

Transfer should be not be approved, as there is no money market account available with that card, and money market should not be an option

Actual:

It showed “Invalid From Account Type” on screen and asked the user if they would like to make another transaction

[SCRUM-15] [Withdrawing \\$20 from chequing account that has \\$20 gets cancelled](#) Created: 26/Jan/24 Updated: 26/Jan/24 Resolved: 26/Jan/24

Description

FIXED IN 1.1

Trying to withdraw 200\$ from a account with 160\$ in it removes 20\$ from the account

Function Tested:

Withdraw

Initial State:

160\$ In Checking

Steps to Reproduce:

Insert card, enter pin for account 1, select withdraw, select checking, input 200\$

Expected:

Transaction should be canceled / denied as insufficient funds

Actual:

ATM withdrew 20\$ from account instead of cancelling/trying to take proper amount

[SCRUM-10] [Requesting balance of money market - Card 2](#) Created: 19/Jan/24 Updated: 26/Jan/24 Resolved: 26/Jan/24

Description

FIXED IN 1.1

Selecting \$20 withdraws \$40, \$40 withdraws \$60, etc...

Function: Withdrawal

Initial State: Select multiple of \$20 to withdraw.

Steps to recreate: ATM On, Card accepted, pin accepted, withdrawal chosen, valid account chosen, selected one of the withdrawal amounts.

Expected result: If current balance is enough, the withdrawn amount should be the amount selected.

Actual result: Withdrawn balance withdraws the next selectable amount available, except for \$200 which withdraws \$20 instead (the lowest amount)

Description

Function: Deposit

Initial state of system: Awaiting envelope to be instered

Steps to recreate: ATM turned on, card entered, pin accepted, deposit selected, account selected, valid amount entered, insert envelope.

Expected Result: Current balance should be previous balance + entered amount.

Actual Result: Current balance is previous balance + entered amount - \$10

Bug exists for both cards
